

Bond Market Insight

Weekly review: Markets under political pressure

MONDAY, 27 JANUARY, 2014

Last week, market conditions were under pressure from political instability and crisis escalation. Risks of a new wave of financial problems increased interest rates on Eurobonds and at the domestic money market, increased demand for FC betting records of trading volumes.

Domestic bond market. Domestic liquidity significantly declined last week. The MoF issued a lot of local currency denominated bonds. FX market shows very high volumes of daily trading. This week, liquidity should remain high but will decline due to new bonds issues, month-end tax payments and pressure from FX market.

Eurobond market. The Eurobond market shows a significant increase in YTM's of Ukrainian Eurobonds. The yield curve become more flat but rise for all maturities above 9.0%, but did not cross the 10.0% border. Spreads significantly widened due to the worsening of the political situation and increasing in risks of problems with debt repayments.

Market update and news

Domestic bond market

Liquidity decline under the pressure

Liquidity declined despite inflows

Local currency liquidity significantly declined last week. Broader banking sector liquidity started last week from UAH43.24bn and through the end of last week declined to UAH42.45bn. Last Tuesday might have tolerated some foul play, and Wednesday we saw a significant increase in liquidity mostly due to the NBU's inflows, mostly purchased government bonds at UAH2.50bn.

The main impact was from new bond issues and the UST

Banks' correspondent accounts slightly rose as a result of last week, but the NBU CDs outstanding significantly declined, especially after last Thursday's redemption. The main impact on liquidity was from the MoF absorption via primary auctions (see comment below) and under the pressure from the FX market where turnover rose to very high volumes, nearly US\$3.23bn on Tuesday.

Chart 1. Banking sector liquidity (UAHbn) (last 3 months)

Sources: MoF, NBU, Investment Capital Ukraine LLC.

Chart 2. Future redemptions of CDs and UAH state bonds (UAHbn)

Sources: MoF, NBU, Investment Capital Ukraine LLC.

Liquidity will decline due month-end tax payments without support

This week, we expect to see significant local currency debt repayments amounting to UAH3.05bn, but the MoF will successfully refinance these repayments, and we will not see the impact of this repayment on liquidity. The NBU's CDs outstanding will decline slightly while the NBU will use these funds for liquidity support due month-end tax payments. So, till the end of this week we will see decline in liquidity if the NBU will not issue new support.

Last week's primary auction results

The MoF had some problems last Tuesday despite high liquidity

Despite significant support of banking sector liquidity from the NBU, which purchased UAH2.5bn of government bonds from the banks' portfolio last Monday, providing a significant increase in banks' correspondent accounts with the NBU on Tuesday, the MoF should have attracted significant demand at the primary auction.

The MoF did not attract needed demand from the first attempt and re-offered one bond

Having UAH2.38bn of debt repayments scheduled for last Wednesday, of which UAH1.95bn were repaid in US dollars, the MoF collected only UAH0.33bn of demand, including only UAH0.06bn (US\$7.06m) of bids for FX-denominated bonds. In addition to the five bonds offered originally, the MoF announced offerings of 3-week USD-denominated and 4-month local currency zero-coupon bonds. Although these additional offerings attracted 300% more demand, the volume was insufficient to refinance all of last week's debt repayments. As a result, the 3-week USD-denominated bond was canceled and then re-offered, finally collecting demand sufficient to cover the majority of today's FX needs.

As a result, debt repayments were mostly refinanced...

At the close, the MoF attracted 17 bids for a total of UAH3.08bn of demand, but accepted only seven bids for a total of UAH2.02bn, including UAH1.68bn in FX (US\$199.73m), which was UAH0.33bn short of all repayments yet covered all principal repayments. At the same time, the MoF will receive fewer funds in FX than it needs last Wednesday.

...but later an additional auction was held

Later last week, the MoF decided to hold an unscheduled auction of four bonds last Thursday, including 3-month, 4-month and 9-month zero-coupon bonds and a 5-year coupon bearing bond, all denominated in local currency.

An unscheduled auction attracted large demand mostly for zero-coupon bonds

Of the offered bonds, only the 9-month bond received no bids. The 5-year bond received only one bid for UAH700.00m at the standard interest rate of 14.25%. The 3-month and 4-month bonds received 10 bids for a total of UAH1.26bn (par value), for which the MoF was forced to increase accepted interest rates.

However, to borrow these funds, the MoF had to increase interest rates significantly

For the 3-month bond, the MoF increased the interest rate by 50bp from a previous 3-month issue placed last July, setting the cut-off interest rate at 8.25%. Only one bid for UAH50.0m submitted at 8.75% was rejected. While the 4-month bonds sold this past Tuesday had a cut-off interest rate of 8.25%, at last Thursday's auction the cut-off interest rate was 9.0% and the weighted average interest rate was 8.98%. Compared to last Tuesday's auction, demand was up two-fold and proceeds were up tenfold.

With refinanced repayments and additional funds to be received, the MoF should refinance its repayments this week

Last week, the MoF likely covered its needs in financing. This week, the Ministry is expected to refinance debt repayments again. Last week shows that the MoF, using the recently approved state budget, will not only refinance debt repayments but also will use the primary bond market for financing budget expenditures, especially prior to large external repayments scheduled for the next month for which could be used for last year's FX reserves.

Eurobond market

Yields increase on instability

Ukrainian risks significantly rose due to the political situation and anticipations of financing problems

Last week, we saw the political crisis in Ukraine escalate which increased a lot of risks to the Ukrainian economy and financial sector. Prior to the large debt repayments scheduled for February and due to officials' declarations, Ukraine preparing to receive a new tranche of funding from Russia. But due to the unstable political situation, risks of default and postponed payments increased anticipations of problems. As a result, spreads significantly widened last week and the 5-year CDS rose to 925bp last Friday from 718bp last Monday and 670bp on Friday a week before.

Chart 3. YTM of some Ukrainian Eurobonds

Chart 4. Ukrainian Eurobonds spreads to benchmark

***Yields rose last week and
will continue to increase
if the situation does not
stabilize***

Till the end of last week, YTMs of Ukrainian Eurobonds rose to 9.25%-9.93%, while a week before the yield curve was not very flat and was around 6.21%-8.55%. Yields are closing in on 10.0%. If the situation does not stabilize, and financing is not received or was just announced this week, we could see yields above 10.0% and possibly crossing 11.0%. But at the same time, main repayments are on the IMF loans should not have a significant impact on market investors.

Appendixes

The following pages contain tabular information on the local fixed-income market. There are tables that detail government debt repayments such as a weekly schedule for current year and quarterly schedule for next 5 years.

Notes: [*] debt redemptions include also interest payments; debt comprises Eurobonds, IMF and VTB loans; IMF loan is meant all tranches received in 2008-10; [1] redemption of US\$2bn loan to VTB is a worst-case scenario within this loan agreement, it may be prolonged 2 times and this in effect may shift the redemption to 4Q11 or 2Q12.

Glossary

The following is the list of terms, phrases and abbreviations that are frequently used in this report's weekly publications.

Average duration, or interchangeably, **bond auction average duration**: Duration calculated from all cash flows obtained from the bonds sold at the auction. Yield-to-maturity, price, and each cash flow (coupons and principal) are calculated on a per-bond basis.

Average yield, or interchangeably, **bond auction average yield**: A yield-to-maturity calculated from all cash flows obtained from the bonds sold at the auction and versus the total price paid per bond to acquire them. Price and each cash flow (coupons and principal) are calculated on a per-bond basis.

Basis point, or interchangeably, **bp**: One-hundredth of a percentage point, or 0.01%.

BoP: Balance of payments.

Certificate(s) of Deposit, or interchangeably, **CD(s)**: Short-term money market instruments that allow the NBU, the central bank, to absorb excess liquidity from the local banks. Their durations are 2, 3, or up to 5 days; two weeks; one month; 1.5 months; two months; and up to three months.

CDS: A Credit default swap; a contract that references the performance of a loan or a bond (sovereign, corporate, or municipal). A CDS is normally quoted in basis points, or hundredths of a percent.

CRA: Credit rating agency. These include international industry majors Moody's, Standard & Poor's, and Fitch. It could refer also to other credit rating agencies, including Credit-Rating of Ukraine.

EFSF: European Financial Stability Facility (<http://www.efsf.europa.eu>), created on 9 May, 2010 by the euro area member states, as a Luxembourg-registered company owned by Euro Area Member States (EAMS), which has a mandate to lend to the EAMS in times of difficulty, e.g., in bail-outs. For the purpose of its operations, the EFSF is able to issue bonds EAMS-guaranteed for up to €440bn. Thanks to its structure of credit enhancements, including a cash reserve and a loan-specific cash buffer¹, the EFSF has top credit ratings from major CRAs: 'Aaa' by Moody's, 'AAA' by S&P, and 'AAA' by Fitch.

MoE: Ministry of Economy of Ukraine (<http://www.me.gov.ua>).

MoF: Ministry of Finance of Ukraine (<http://www.minfin.gov.ua>).

NBU: National Bank of Ukraine, the central bank of Ukraine (<http://www.bank.gov.ua>).

Party of Regions, or interchangeably, **PoR**: The *de facto* ruling political party in Ukraine currently. It won the presidency in the February 2010 presidential elections with a slim margin over Yulia Tymoshenko's Bloc, then consolidated power in the parliament, where it has a majority over minor loyal factions, while incapable of forming a majority itself. The next elections for Parliament and the president's office are expected to take place in 2012 and 2015, respectively.

¹ For instance, in order to lend €17.7bn to Ireland, the EFSF has to raise around €26.5bn from the financial market.

Percentage point, or interchangeably, **ppt**: one percent, 1%.

Recaps, or interchangeably, **recapitalisation bonds**: Local-currency bond(s), representing a general financial obligation by the government on par with other government's financial obligations, which was/were issued with the purpose of recapitalising state-owned entities like Naftogaz of Ukraine, commercial banks from Ukreximbank to Oschadbank, and the State Mortgage Institution (SMI).

UAH: Ukrainian national currency, the hryvnia.

UAH TWI, or interchangeably, **hryvnia trade-weighted index**: Index of the local currency calculated by Investment Capital Ukraine (ICU), which is calculated upon nominal exchanges rates to the US dollar and headline consumer price inflation indices of Ukraine and its 26 trading partners, which as a whole, comprise a 76% share of merchandise trade turnover. Please refer to *ICU Quarterly Report "Ukraine's See-saw Puzzle"* published on 14 July, 2009 for more details on the methodology of the index. There are nominal and real UAH TWIs, the former based on exchange rates, and the latter based on both exchange rates and inflation. There are monthly and daily UAH TWIs, which are tracked by ICU. Monthly TWI calculation is based on the monthly data for inflation and trade statistics as well as monthly average exchange rates. Daily TWI calculation is based on the monthly data for inflation and trade statistics; however, its core substance is to reflect daily movements of the exchange rates of Ukraine's currency as well as of its key trading partners.

UAS: Ukrainian accounting standards.

VATs, or interchangeably, **VAT bonds**: Local-currency bond(s), representing a general financial obligation by the government on par with other government's financial obligations, which was/were issued in accordance with the government's initiative to offload the government's accumulated arrears on VAT refunds to domestic exporters.

Weighted-average duration, or interchangeably, **bond auction weighted-average duration**: Duration calculated from all cash flows obtained from the bonds sold at the auction. Yield-to-maturity, price, and each cash flow (coupons and principal) are calculated for the total number of bonds sold at the auction.

Weighted-average yield, or interchangeably, **bond auction weighted-average yield**: A yield-to-maturity calculated from all cash flows obtained from the bonds sold at the auction and against the total price paid to acquire them. Price and each cash flow (coupons and principal) are calculated for the total number of bonds sold at the auction.

YTM, or interchangeably, **yield-to-maturity**: The interest rate that creates the present value of cash flows obtained from holding a bond equal to the price of the bond. The YTM factors in coupon income and any capital gain (loss) the investor will realise by holding the bond to maturity. It also takes into consideration the timing of coupon payments and principal repayment, which can be done at the maturity date (for a bullet bond) or in accordance with an amortisation schedule (amortisation bond). The YTM uses an interest-on-interest principle, assuming that coupon income can be reinvested at an interest rate equal to the YTM, and is calculated in accordance with the Ukraine's domestic bond market standard, which is represented by the following formula:

$$Price + AI = \sum_{i=1}^n \frac{CF_i}{(1+YTM)^{\frac{t_i}{365}}},$$

where *Price* and *AI* are clean price and accrued interest of the bond, respectively, as of the date of purchase; *n* is the number of cash flows to be obtained by a bond holder; *CF_i* is the

cash flow (coupon income, principal repayment) obtained from a bond; t_i is the number of days between a purchase date and i -th cash flow date, and YTM is yield-to-maturity.

YTW, or interchangeably, **yield-to-worst**: The same as yield-to-maturity (YTM); however, it is calculated assuming the worst-case scenario under the terms of a bond issue, e.g., the cash flow is trimmed to the earliest possible bond redemption such as due to a call or a put option, embedded into the bond.
